Significant Characteristics and Applications

- High melting point, low vapor pressure
- Good resistance and mechanical stability at high temperatures
- Thermal shock resistant
- Low thermal expansion
- Application under vacuum or reducing atmosphere
- Good corrosion resistance in liquid metals and glass melting

Pure Molybdenum is used, for example, for high temperature heating elements, shielding, filaments, evaporation crucibles, rocket propulsion, X-ray anodes, welding electrodes, thermodes, coatings for wear protection, components and melting electrodes for glass fabrication, sputtering targets and others.

Titanium-Zirconium-Molybdenum (TZM)

TZM is a micro-alloyed Molybdenum with Titanium-Zirconium-Carbides (0.4-0.55 % Ti, 0.06-0.12 % Zr, 0.01-0.03 % C). By means of solid-solution and carbide-strengthening TZM features improved high temperature strength up to 1400 °C and a higher recrystallization temperature, compared to pure Molybdenum.

Typical Applications of TZM: Components for heat treatment equipment, supports, fixtures, carriers, hot runner nozzles, casting moulds, forging dies, welding electrodes and others.

Molybdenum-Lanthanum (ML)

Through doping with Lanthanum-oxide (typ. 0.2-0.7 weight.% La₂O₃) and a suitable production process an elongated grain structure with fine disperse La₂O₃-particles occurs. This structure has a higher recrystallization temperature and a good creep resistance. Depending on the semi-finished product, lanthanated Molybdenum components can be used for temperatures up to 1800 °C.

Typical Applications of ML: Heating elements, wires for lighting technology, sintering trays, hot-zone-components and others.

Mechanical Properties

- Hardness: 200-400 HV (typ.)
- E-Modulus: 330 GPa (20 °C), 280 GPa (800 °C)
- G-Modulus: 138 GPa (20 °C)
- Yield Strength Rₚ₀.₂: 500-900 MPa (typ.)
- Elongation A: 5-20 % (typ.)

Material Types and Alloys

- Mo 99.9 % (Type 360 – Unalloyed vacuum arc-cast)
- Mo 99.96 % (Type 365 – Unalloyed vacuum arc-cast)
- Mo 99.95 % (Type 361 – Unalloyed powder-metallurgical)
- Titanium-Zirconium-Molybdenum (Type 363 Ti,Zr,C-alloyed vacuum arc-cast)
- Titanium-Zirconium-Molybdenum (Type 364 Ti,Zr,C-alloyed powder-metallurgical)
- MoW 30 (Type 366 vacuum arc-cast)
- ML Molybdenum-Lanthanum (Lanthanum oxide doped)
- MoRe 47.5, MoRe 45.5, MoRe 41
- MoCu (Molybdenum-Copper)

ASTM Standard Specifications

- ASTM B387 (Molybdenum and Molybdenum Alloy Bar, Rod and Wire)
- ASTM B386 (Molybdenum and Molybdenum Alloy Plate, Sheet, Strip, Foil)
- ASTM F364 (Molybdenum Wire and Rod for Electronic Applications)
- ASTM F289 (Molybdenum Wire and Rod for Electronic Applications)

Range of Products

Foils, strips, ribbons, sheets, plates, wires, rods, tubes, mesh, sputtering targets, electrodes, contacts, filaments, standard fasteners (screws, nuts, washers and others), crucibles, hot-zone-components, heating elements, sintering trays, supports, carriers, heat shielding (e.g. MOTEX shielding), electrodes, protective tubes for thermocouples, miscellaneous customer-specific components according to drawings.
